DEPARTMENT OF HEALTH

1986 VITAL STATISTICS REPORT

KAY A. ORR

GOVERNOR

Gregg F. Wright, M.D., M.Ed.
Director of Health

Stanley S. Cooper, M.S., Ph.D.
Director, Bureau of Vital Statistics

Report Prepared by:

Division of Health Data and Statistical Research
Mary Lou Eastman, M.S., Director

FOREWORD

Nebraska statute requires that records of birth, death, fetal death, marriage, and divorce be filed with the Bureau of Vital Statistics of the Department of Health. Approximately 60,000 records of vital events occurring in Nebraska are filed annually, and are added to the nearly five million such records already on file. Over 100,000 certified copies from those records are issued each year.

Responsibility for filing certificates of birth lies with the individual in attendance at birth, usually a physician. Funeral directors are responsible for filing certificates of death and of fetal death when burial takes place. Hospitals are to file fetal death certificates when hospital disposal is performed. County judges and district court clerks are, respectively, responsible for filing records of marriage and divorce.

The excellent cooperation of all the individuals mentioned is appreciated, and permits development of the tabulations presented in this report. Providing useful data stands as the goal of this report, and any questions or comments regarding the report, or requests for more detailed information, should be directed to:

INTRODUCTION

The information presented in this report is drawn from the vital records of the State of Nebraska. Records of events which occur in other states for Nebraska residents received through an Interstate Exchange Agreement are also utilized. The primary period covered is calendar year 1986, but selected data from previous years are also included. Data from 1986 records received after April 1, 1987 by the Bureau of Vital Statistics are not included in the tabulations in this report. However, the number of such records is minimal and their statistical effect negligible.

The congenital anomaly data presented in the report are taken from the Nebraska Birth Defects Registry, with the exception of the death data. Information for the Registry is provided by reporting personnel in approximately 100 Nebraska hospitals.

The state population figure used in the calculation of rates is 1,598,000, the 1986 estimate by the United States Bureau of Census. County, city, and balance of county populations used are Health Department estimates. U.S. vital event data, presented for comparative purposes, are provisional and are from the National Center for Health Statistics.

Characteristics of the population, such as its size and its age structure, can bear a great influence on vital statistics data. Only 30 counties and 12 cities in Nebraska had populations over 10,000 at the 1980 Census. Nine counties had less than 1,000 residents. In any area with a population under 10,000, wide variations in numbers or rates of events can appear from year to year, and no single year may be truly representative of the population. Counties with a high proportion of young people will show relatively higher birth rates and lower death rates than counties with greater numbers of older residents.

Information for towns having populations of 2,500 or more are included in this report, but information is available for towns where populations are 1,000 or more persons.

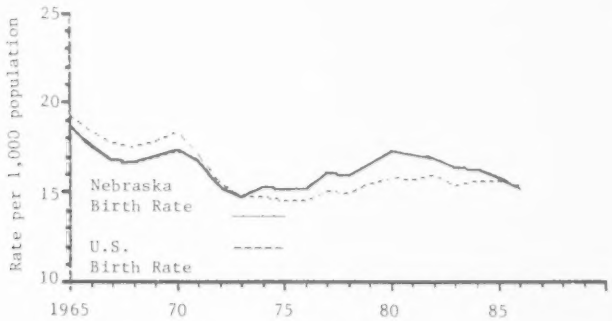
BIRTH OVERVIEW

Nebraska resident live births continued to decline for the sixth consecutive year. This trend is expected to continue at least into the mid 1990's. The number of births decreased 4.4% to 24,425 from 25,540 in 1985. This is a larger decrease than had been previously occurring during the 1980's and the number is the lowest since 1976. Nationally, the number of births, the crude rate and the fertility rate all declined. The United States fertility rate was the lowest ever observed at 64.9 live births per 1,000 women aged 15-44 years. Nebraska's estimated fertility rate dropped to 67.4 in 1986 from 69.1 in 1985.

The crude birth rate decreased 3.8% to 15.3 per 1,000 population from 15.9 in 1985, dropping below the United States rate of 15.5. A comparison of Nebraska and United States rates for a twenty-one year period is shown in the graph below. Though Nebraska's rates have been both higher and lower than the national rates, their trends are similar.



Rates for counties within the State ranged from a high in Grant County of 24.8 to a low of 4.2 in Arthur County. Rates for towns of at least 2,500 population ranged from a high in Plattsmouth of 23.2 to a low of 9.0 in Wahoo. These are good examples of the kind of variability that occurs when you have small numbers involved.

Most Nebraska births continue to occur in hospitals and are attended by physicians. In 1986 there were 90 (0.4%) births reported as not occurring in hospitals. This percentage has been essentially unchanged during the 1980's. The percent of births reported as not attended by a physician remained unchanged from 1985 at 0.2%.

The educational level of both mothers and fathers is continuing to increase. The following table shows percentages for known cases. (The number of unknown cases is higher for fathers than mothers because the item is generally not reported on certificates of out-of-wedlock births, but trends should not be significantly affected.)

	MOTHER					FATHER				
EDUCATION	1970	1975	1980	1985	1986	1970	1975	1980	1985	1986
≥12 yrs.	81.6%	83.7	86.4	89.3	89.4	84.7%	88.7	90.6	92.7	93.1
≥16 yrs.	9.6%	14.0	16.1	18.6	19.4	18.6%	23.3	24.3	25.3	25.6

White births accounted for 88.6% of the births in 1986, down from 89.2% in 1985, continuing a decline that has been occurring for the last decade. Douglas County had the largest share of the non-white births, 53.0% followed by Lancaster, Sarpy and Scotts Bluff counties with 9.7%, 7.6%, and 7.2% respectively.

Out-of-wedlock births remained the same in number as 1985 at 3,788. However, the rate continued to increase and did so by 4.6% between 1985 and 1986. While the percentage of white births which are out-of-wedlock is much smaller than it is for non-white, its increase has been steady. However, the percentage of out-of-wedlock births which were white declined. The percentage of out-of-wedlock births accounted for by each race or ethnic group and the percentage of births for each race which were out-of-wedlock are shown in the following table.

	PERCENT OF OUT-OF-WEDLOCK BY RACE				PERCENT OF RACE OUT-OF-WEDLOCK			
	1975	1980	1985	1986	1975	1980	1985	1986
White	64.9	68.5	69.5	67.7	6.2	8.8	11.6	11.8
Black	27.4	22.7	21.3	22.3	55.4	56.1	59.6	63.6
Indian	4.6	4.3	5.1	5.7	41.7	40.5	53.0	61.4
Mexican	3.0	4.1	3.6	4.0	18.2	16.2	17.9	17.6
All Other	0.2	0.3	0.5	0.3	2.4	4.3	6.5	5.1

For the second year, teenagers do not represent the largest age group for out-of-wedlock births. While the numbers are small, they have not improved for the very young teenagers, those under 15 years of age. The average age of the mother of a first born out-of-wedlock child decreased slightly to 20.2 years from 20.6 in 1985. Older age groups are continuing to increase their proportions for both out-of-wedlock and all births. This will probably continue for several years as a reflection of population distribution. The percentage distributions by age groups of mother for out-of-wedlock births and all births for five years are presented in the following tables.

OUT-OF-WEDLOCK BIRTHS

AGE	1982	1983	1984	1985	1986
Under 20	40.0	39.0	39.0	36.3	35.7
20-24	37.3	38.9	37.8	38.7	38.7
25-29	15.1	15.0	15.6	17.4	17.3
30 & over	7.6	7.0	7.7	7.6	8.3

ALL BIRTHS

AGE	1982	1983	1984	1985	1986
Under 20	10.5	10.0	9.7	9.1	8.9
20-24	33.8	33.3	31.6	30.6	29.4
25-29	34.8	34.0	34.8	35.9	36.1
30 & over	21.0	22.6	23.9	24.5	25.7

The next two tables show the effect of population distribution and fertility changes. Population shifts have had the greatest effect in recent years.

AVERAGE AGE OF MOTHER

AGE	1970	1975	1980	1985	1986
1st born	22.1	22.7	23.3	23.6	23.8
2nd born	24.7	25.4	25.9	26.3	26.4
3rd born	27.3	27.6	28.4	28.2	28.3

MOTHER'S AGE RANGE FOR BIRTH ORDER AVERAGES BY YEAR

	1.00 - 1.99	2.00 - 2.99	3.00 - 3.99	4.00 - 4.99	5.00+
1970	13 - 23	24 - 27	28 - 31	32 - 36	37+
1975	12 - 25	26 - 31	32 - 34	35 - 38	39+
1980	13 - 25	26 - 32	33 - 37	38 - 41	42+
1985	13 - 26	27 - 34	35 - 41	-	42+
1986	13 - 25	26 - 34	35 - 40	41 - 43	44+

The average number of pregnancies per woman having a live born child in 1986 remained at 2.4 for the fourth consecutive year. The average number of live born children per woman having a live born child remained at 2.1 for the fifth consecutive year. The frequency of high order births (here defined as five or more) has continued to decrease during the 1980's but at a much slower pace than during the 1970's. The number of high order births in 1970, 1975, 1980, 1985 and 1986 was 2655, 1238, 1005, 894, and 892 respectively.

Low birth weights occurred in 5.5% of the births, up from 5.3% in 1985. While this percentage has generally been on a slow decline, there have been two previous occassions since 1970 when there was an increase followed by decline again. Birth weights of ten or more pounds occurred in 1.9% of the births, down from 2.0% in 1985. Prenatal care beginning in the first trimester of pregnancy increased to 81.2% of the births, up from 80.2% and 79.6% in 1985 and 1984 respectively. The percent of mothers who had at least ten prenatal visits continued to increase to 73.1% from 70.6% and 68.1% in 1985 and 1984 respectively. The percent of mothers who had no prenatal care decreased slightly to 0.5% from 0.6% in 1985.

Congenital anomalies were reported to the Birth Defects Registry on 605 resident 1986 Nebraska births. This total represents 2.5% of the 24,626 live births and fetal deaths, equal to the final percentage for 1985.

A much higher proportion of the congenital anomaly cases were of low birth weight than the overall live births; 20.6% as compared to 5.5%. Eleven cases were stillborn at 20 or more weeks of gestation, representing 5.5% of all fetal deaths. Only one congenital anomaly was reported on 437 of the cases, while 88 had two, 37 had three, 20 had four, and 23 had five or more anomalies noted.

Katie was the most popular name given to girls born in 1986, replacing Christina, while John remained the name most frequently given to boys.

Out-of-State: A Nebraska resident giving birth or dying outside of Nebraska.

Non-Resident: A non-Nebraska resident giving birth or dying in Nebraska.

DEATH OVERVIEW

The number of deaths decreased by 1.6% from 1985 to 14,662. The crude rate also decreased slightly to 9.2 per 1,000 estimated population. Nationally, the rate remained at 8.7 for the third year. In general, the Nebraska death rate remains quite stable.

Within the state, 1986 county death rates ranged from a high of 20.1 in Furnas County to a low of 2.1 in Arthur County. Rates for towns of at least 2,500 population ranged from a high of 23.5 in Falls City to a low of 1.7 in LaVista. LaVista has been in this low position throughout the 1970's and 1980's.

The causes represented in the ten leading causes of death are the same as those for the previous three years. However, there was some exchanging of positions which occurred. Pneumonia and accidents exchanged the fourth and fifth places as they had done between 1984 and 1985. Pneumonia decreased by 7.7% and accidents increased by 8.6%. Atherosclerosis and diabetes mellitus exchanged the seventh and eighth places. Atherosclerosis decreased by 7.2%, but diabetes primarily caused the change by increasing 19.4%. Chronic Lung Disease remained the sixth leading cause, but did decrease by 18.2% after having increased 36.3% in 1985. Suicide remained the ninth leading cause of death, but increased by 29.7%. The number of suicides reached the highest it has been since 1938. The rate, 14.2, is the highest it has been since 1941 when it was 16.0. The numbers increased in nearly all age groups, but the 160% increase in the 25-29 age group was the most dramatic. However, the 20-24 age group showed a small decrease of 13.6%. Cumulatively, the ten leading causes accounted for 82.5% of all deaths.

Heart Disease, the leading cause of death, declined by 4.6% and the rate declined by 4.3%. The United States rate declined by 2.0%

The second most frequent cause of death, Cancer, increased by 1.3%, continuing its upward trend. The national rate also increased slightly by 0.5%. Bronchus and Lung is the most common site and again increased. The breast is still the most common site for females, but did decrease from 1985's record high.

Death rates per 100,000 estimated population for Heart Disease and Cancer in Nebraska and the United States for a ten year period are shown in the following table.

	HEART DISEASE		CANCER	
YEAR	NEBRASKA	UNITED STATES	NEBRASKA	UNITED STATES
1977	337.9	331.6	182.0	178.4
1978	348.4	333.0	188.2	181.9
1979	348.2	330.2	184.0	183.9
1980	349.8	335.2	188.0	186.3
1981	357.5	329.5	187.5	184.3
1982	361.0	326.9	187.6	188.6
1983	351.7	326.3	184.8	188.6
1984	350.2	323.2	192.2	192.1
1985	347.6	323.2	193.5	192.5
1986	333.4	317.2	196.8	193.4

Cerebrovascular Disease, the third leading cause of death, increased by 3.0% following two years of decrease, giving a rate of 73.8. The national rate continued to decline, however, and stands at 61.2.

Accidents continued their up and down trend by increasing 8.6% after 1985's 8.8% decrease. Motor Vehicle accidental deaths accounted for the largest single category of increase as it had lead last year's decrease.

The leading cause of death for males under age 40 was accidents, then heart disease takes the lead. For females the leading cause of death under age 35 was accidents, then cancer takes the lead until age 70 when heart disease takes over the lead.

Frequencies and crude rates are one way of measuring the impact of mortality. Another way is to look at the effect of premature death. Two graphs have been included in this report which give an indication of this effect. One deals with the cumulative number of years of life lost in which the leading causes start out much the same as the traditional lists because their high frequencies carry much weight, but, as you move down the list, causes which are associated with infants and young people move ahead of some causes associated with older people. The other graph shows the average number of years lost by individuals dying of a particular cause. Here, conditions associated with infants appear at the top followed by those associated with young people and Heart Disease does not even appear in the top ten.

The average age at time of death decreased by 0.4 year in 1986 to 72.8 years. This was the first decrease since 1981. Males and females both declined with males dropping to 69.4 years and females to 76.4 years. The oldest Nebraskans dying in 1986 were three women aged 107. There were 104 persons who died at the age of 100 or more years, an increase of just one after a 27% increase in 1985. There were 11 males and 93 females who were at or past the century mark.

MATERNAL, INFANT, AND FETAL DEATHS

There was one maternal death reported in 1986, the same as 1985. This case was attributed to an intracranial hemorrhage.

Infant deaths remained the same in number as 1985, 246. However, the infant death rate rose to 10.1 per 1,000 live births from 9.6 in 1985. This increase, while sizeable, should be interpreted with caution. Rates based on a small number of events often fluctuate substantially from year to year, and it would not be surprising for Nebraska's infant death rate to fall markedly in 1987. Nebraska's 1986 infant mortality rate still remains lower than the U.S. rate, which declined to 10.4 infant deaths per 1000 live births in 1986. A comparison of the state and national rates is shown in the table below.

YEAR	NEBRASKA NUMBER	NEBRASKA RATE	UNITED STATES RATE
1982	269	10.0	11.2
1983	258	9.8	10.9
1984	251	9.6	10.6
1985	246	9.6	10.6
1986	246	10.1	10.4

The infant death rate for whites increased slightly to 9.3 from 9.2 in 1985, while the non-white rate rose to 16.2 from 13.4 in 1985. This is the third year of increase for the non-white rate, but the numbers involved are small and therefore quite variable.

Fifty-one percent of the infant deaths were of low birth weight, down from 57% in 1985. Twenty-nine percent were under 2 lbs. 4 ozs., down from 32% in 1985. The percentage of infant deaths that were in the neonatal period increased slightly to 65.9% from 64.6% in 1985.

Fetal deaths also increased by 8.1% to 201 and the rate increased to 8.2 per 1,000 live births from 7.3 in 1985. This is the largest number of fetal deaths reported since 1982.

MARRIAGE AND DIVORCE OVERVIEW

Nebraska marriages again decreased in both number and rate between 1985 and 1986, dropping 4.6% to a total of 12,107. The marriage rate per 1,000 population declined to 7.6 from 7.9 in 1985. The number is the lowest since 1965 and the rate is the lowest since 1962. The United States rate also declined from 10.2 in 1985 to 10.0 in 1986.

Marriage data are generally presented based upon the number of marriages occurring in a given area. Through an exchange of records with other states (in situations where Nebraska residents are married outside the state), it is possible to produce marriage data based on the county of residence. Although the exchange is not complete, the resident data are believed to be complete enough to be useful as general indicators. In 1986, resident county marriage rates ranged from a low of 3.8 persons from Boyd County marrying per 1,000 population to a high of 19.4 from Lancaster County. The state resident marriage rate increased to 14.6 from 14.4 in 1985.

The most frequent age at marriage for grooms increased to 23 years, breaking the eight year trend of 22 years. For the third straight year, the most frequent age at marriage for brides remained at 22 years.

The percentage of marriages which were first for both bride and groom decreased for the eighth year in a row to 59.5%. The percentage of marriages which were first for neither the bride nor the groom increased to 19.5% after having decreased to 18.8% in 1985. The following table presents the trend in first marriages for the past five years.

YEAR	FIRST MARRIAGE FOR BOTH PARTNERS	PERCENT OF ALL MARRIAGES
1982	8,777	61.2
1983	8,449	61.7
1984	8,074	60.8
1985	7,709	60.7
1986	7,208	59.5

Evidence of the United States as a continuing "melting pot" is given by the fact that approximately 3.1% of the marriages were inter-racial in 1986. This is an increase from 2.9% in 1985. When comparing the previous years of 1980, 1975, and 1970, the respective percentages are 2.5, 2.3, and 1.3.

Residents of several foreign countries and all except three states, Delaware, Maine, and New Hampshire, were married in Nebraska in 1986. Both bride and groom were Nebraska residents in 86.9% of the marriages; neither was a resident in 5.5%.

June, the traditional month for marriages, was for the eleventh consecutive year the most popular month with 1,658 occurring then. January remained the least popular month for the fourteenth straight year with 440 marriages. Both June and January were lower than last year.

Nebraska divorces decreased by 3.0% in number to 6,127 and the rate returned to the 1978 level of 3.8 per 1,000 estimated population. The United States rate also declined and returned to its 1975 level of 4.8.

The most frequently reported ages at divorce were 25 years for women and 30 years for men. These ages tend to vary from year to year.

More divorces occurred after two years of marriage than any other length of time, and 36.8% of the 1986 divorces occurred less than five years after marriage. More than half of the divorces occurred in marriages of less than seven years.

First marriages were being ended for both partners 63.1% of the time, a slight increase from the 62.9% in 1985. This is a reversal of the downward trend that had been occurring. Marriages other than first were being dissolved in 17.6% of the divorces, which continues a generally increasing trend.

Some type of settlement was granted in 90.0% of the 1986 divorces. A combination of child support and property settlement was most common (35.3% of cases), followed by property settlement alone (33.8% of cases). Child support was granted in 81.0% of the divorces in which children under 18 were affected. Of the total divorces, 62.8% affected children under 18 years of age. There was an average of 1.9 children per divorce where children under 18 were affected.

POPULATION OVERVIEW

The United States Bureau of the Census estimated the population of Nebraska for 1986 to be 1,598,000, a decrease of 0.5% from 1985.

The table below shows natural increase (the excess of births over deaths) and net migration for Nebraska for each decade since 1930 and for part of the current decade.

DECADE	NATURAL INCREASE	NET MIGRATION
1930-1940	112,471	-174,600
1940-1950	139,270	-129,594
1950-1960	201,518	-115,698
1960-1970	147,200	- 73,197
1970-1980	97,420	- 12,928
1980-1986	68,404	- 40,229

Nebraska has consistently experienced out-migration over the period shown, but it had been decreasing steadily. However, during the 1980's out-migration has been on the increase.

Population projections for Nebraska are available from the Bureau of Business Research of the University of Nebraska-Lincoln. County estimates for 1986 will be available from the Nebraska Department of Natural Resources or the U.S. Bureau of the Census. County, town and age group estimates used in rate calculation in this report were developed by the Health Department for that purpose.

Population counts by age are available only for Census years, and the graphic on the facing page shows Nebraska's population in 1980 distributed by age and sex. The large proportion of the population born during the "baby boom" years, as well as the large proportion of elderly, are evident.

DEFINITIONS

BIRTHS

BIRTH ORDER - The number of live born children including the current birth.

BIRTH RATE - The number of live births per 1,000 population.

FERTILITY RATE - The number of live births per 1,000 females 15-44 years of age.

LENGTH OF PREGNANCY - The duration of gestation, in completed weeks, as calculated from the first day of the last normal menses to the date of birth.

LIVE BIRTH - The complete expulsion or extraction of a product of conception from its mother, irrespective of the period of gestation, which, after such separation breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached and is reportable.

LOW-WEIGHT BIRTH - A live born infant weighing 5½ pounds or less.

OUT-OF-WEDLOCK BIRTH RATE - The number of out-of-wedlock births per 1,000 live births.

SEX RATIO - The number of male births for each 1,000 female births.

DEATHS

DEATH RATE - The number of deaths from all causes per 1,000 population.

FETAL DEATH - Death prior to the complete expulsion or extraction of a product of conception from its mother, irrespective of the duration of pregnancy. Until the pregnancy has reached 20 weeks duration, it is not required that such a death be reported.

FETAL DEATH RATE - The number of fetal deaths per 1,000 live births.

INFANT DEATH - Death of a person under age one year.

INFANT DEATH RATE - The number of infant deaths per 1,000 live births.

MATERNAL DEATH - Death attributable to delivery or the complications of pregnancy, childbirth or the puerperium.

MATERNAL DEATH RATE - The number of maternal deaths per 100,000 live births.

NEONATAL DEATH - Death of a person under 28 days of age.

NEONATAL DEATH RATE - The number of neonatal deaths per 1,000 live births.

PERINATAL DEATHS - Fetal deaths plus neonatal deaths.

PERINATAL DEATH RATE - The number of perinatal deaths per 1,000 live births plus fetal deaths.

RESIDENCE - A person's usual place of abode. This means, in general, the place where one lives and sleeps most of the time. However, when usual residence is in a nursing home or other institution, residence is considered the place where the person lived prior to admission to the institution.

OCCURRENCE - The location in which an event takes place irrespective of the usual residence of persons involved.
